Workshop Management and Parts Control System

Everyone in the trucking business has one thing in common: if the wheels aren't moving, your business has stalled.

Many of the common reasons why trucks and equipment experience downtime can be controlled through timely preventive maintenance (PM), having the right parts on the shelf and effectively controlling the limited resources of your business.

Customer CONNECT workshop management software is the right tool to help you manage the maintenance requirements on your prime movers, trailers, forklifts or earthmoving equipment. Whether you maintain 20 or 2,000 units, you can easily ensure that PM services and RTA requirements are always met on time and that your equipment maximises its time in the field.

- ✓ 100% Web Based
- ✓ Multi-User
- ✓ Multi-Facility
- ✓ Multi-Customer
- ✓ Customisable
- ✓ Secure

The comprehensive software program includes the following features:

- Custom pricing functions
- Readily available work order history
